

## LIGHTOLIER'S CANADIAN INDIRECTOR™ SERIES OPENS NEW HORIZONS FOR APPEALING, COST-EFFECTIVE INDIRECT ILLUMINATION SUITED TO PUBLIC SPACES OF ALL KINDS

Montréal, August 31, 2006 – Redesigned for the Canadian market, Lightolier's Indirector Sharpe luminaire offers contemporary styling in a family of easy-aim, high-lumen asymmetrical floodlights, precision engineered for high-performance shielding in any of the five available mounting options.

The Canadian-made Indirector Sharpe offers durability and adjustability (tilting head angle and internal reflector) comparable to its US version. In addition, an optimized reflector shape and position inside the head minimizes glare and eliminates the need for an unsightly visor accessory, contrary to most competing products.

A new member of Lightolier's Specification Decorative product category, known as SpecDec, Indirector Sharpe comes in a broad selection of floodlights, with head sizes ranging from 11" to 29" wide. Luminaires are sized to the lamps for superior optical performance, ensuring a consistent look even when a space requires different light levels and luminaire formats.

"When the Indirector luminaire is properly installed, with respect to setback, aiming and spacing, the result is a powerful lighting statement that performs well energy-wise and that's pleasant to look at, too," says François-Xavier Morin, Product Manager for Lightolier Specification Decorative products including Indirector. "Plus, it installs on the wall or on the ceiling, in addition to providing ceiling mounted wall-wash possibilities."

Flexible mounting options include an attractive cantilever design, and the choice of an integral or remote ballast. Optical features include a highly specular segmented/hammertone reflector and a choice of clear or prismatic lens on most models. The wide variety of lamps, including halogen (T-3), CMH (T-6), MH (ED-17, T-15) and CFL (TTT, TT-5), increases application versatility. Indirector Sharpe is available in a choice of painted finishes: aluminum, black and white.

## **About Lightolier SpecDec**

Indirector Sharpe belongs to the Lightolier SpecDec product category, which includes some 35 specification-grade decorative luminaires. SpecDec products are ideally suited whenever lighting applications call for added durability, superior energy savings and aesthetically pleasing surroundings. They are designed for quality decorative lighting in offices and conference rooms, circulation areas, public spaces, as well as bath, kitchen and recreation areas.

The Lightolier brand is a part of Canlyte, Canada's largest lighting manufacturing group. Lightolier serves residential, commercial and institutional markets with stylish, innovative and energy-efficient luminaires engineered in North America. Its 9 product categories yield thousands of indoor lighting opportunities, including recessed, track, architectural fluorescent, specification decorative, architectural controls and intelligent lighting solutions.
